

ЦАРЬ КОКОКОРЬ

Does a bell have to ring before it is truly a bell? The Russian Tsar Bell was the largest bell ever cast at over 200 tons. But in 1732, before it was ever struck, this Goliath of bells broke. Its parts have been on display in the Kremlin ever since.

A team of UC Berkeley and Stanford researchers made the Tsar Bell ring for the very first time. With Finite Element Analysis (FEA), they created a computational model of what the bell would have sounded like. The recreated Tsar Bell will be "played" in concert with the UC Berkeley Carillon at Sather Tower — just in time for Cal Day.

April 15 and 16, 2016

Noon to 4 PM

Sather Tower, UC Berkeley

A project by Ed Campion, Chris Chafe, Jeff Davis, Olya Dubatova, John Granzow, Jeff Lubow, Perrin Meyer, Greg Niemeyer, and James O'Brien featuring carillon compositions by Chris Chafe, Jeff Davis and DJ Spooky, with graphics and videos by Olya Dubatova.

Special thanks to Romain Michon, Tiffany Ng, Lara Wolfe, Meyer Sound, the Berkeley Arts + Design Initiative, the Berkeley Center for New Media, the Institute of Slavic, East European, and Eurasian Studies, UC Berkeley CNMAT, Stanford University CCRMA, and the University of Michigan.
